High efficiency for installing new IP cameras without replacing existing analog cameras

Security integrators and installers must adapt to project requirements and customer demands as well as having to manage multiple technology solutions. Some installations require to keep existing analog cameras while needing to install new network camera with high-definition video technologies. That's where pentabrid DVRs offer a perfect solution. Pentabrid DVRs offer flexibility to integrators and installers to be able to meet customer and project demands.

Up to 4K resolution monitoring (HDMI) and dual monitor

Wisenet Pentabrid DVRs provide high resolution up to 4K. It also offers various layouts including dual monitor support using HDMI and VGA outputs so that users can select and view desired areas. Clone and expand modes are available for flexibility.

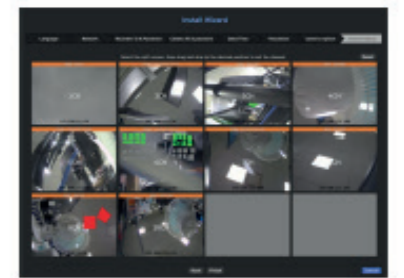

Dual recording for efficient monitoring

Images are compressed and stored in both low and high resolution (H.265/H.264) simultaneously to enable easy multi-channel monitoring. Dual recording playback is effective in mobile and remote monitoring as it helps speed up the search time.

User friendly UI

The Wisenet pentabrid DVR lineup have a more intuitive UI design for ease-of-use. The enhanced UI is consistent with Wisenet NVR's for seamless operation. Operators simply select camera icons from the navigation tree, then drag-and-drop for viewing. The upgraded installation wizards offers a simple first time configuration of analog and IP cameras.

Easy connection with P2P service (QR code)

A user can monitor their cameras with the free Wisenet Mobile app by simply scanning a QR code without complicated network configuration. Push notification of events helps operators provide a rapid response.
