AM-412 Applications

III Installation

Below is a general, sample procedure using a Corner mount bracket:

1. Combine the two metal pieces together using the M8 hex nuts and washers.
2. Align the assembled brackets with the desired position. Align screw holes on the brackets against the wall. Drill holes on the wall for securing the bracket and for routing the cables. Hammer the anchors into the wall. Note that these screws and wall anchors are user-supplied.

3. The 4 screw holes in the center are used for directly mounting the IB series bullet cameras.

The 3 screw holes in the center are used for mounting the IB8367A, IB8369A, IB8377-H, IB8379-H, and IB9389 bullet cameras.

4. Secure the AM-719 conduit box to bracket using the M5 screws, washers, and hex heads. A hex crescent wrench is required.

5. For the rest of the installation procedure, refer to the documentation that came with the AM-719, AM-218, and the other accessories.

The 3/4" cable glands and conduits for protecting cables are user-supplied.

If you are installing a bullet camera directly to the bracket, use the M6 screws in the center. A hex crescent wrench is required.

Below are the corresponding mount holes for the MS9390-HV.

The installation of IB8367A, IB8369A, IB8377, IB8379, and IB9389 is similar to the above, except using different mounting holes and screws.

For the IB9367-EHT-v2, secure the adapter plate to the bracket using M6 x 20 socket screws. Tighten the hex nuts to secure from the other side.
