IE360 Series

Industrial Ethernet Layer 3 Switches

The IE360 Series Industrial Ethernet Layer 3 switches provide seamless data transfer for critical infrastructure sectors.

Overview

Allied Telesis IE360 Series switches are the perfect solution for secure connectivity for critical infrastructure and industrial automation networks.

They feature MACsec to protect your critical data against sniffing exploits, spoofing, and manipulation, making secure communication possible between control centers and remote sites. These hardened switches can withstand environmental conditions such as electromagnetic noise, wide temperature, humidity, vibration, and the risk of being exposed to flammable substances.

The IE360 Series provides network infrastructure for many vertical markets and related applications, such as:

▶ **Cranes & Logistics**
Control of automated stacker cranes and other devices that boost the efficiency of dynamic warehouse environments.

▶ **Industrial automation and process control**
Interconnection of machines, IoT devices, sensors, and more. Instant communication between systems and people enables improved efficiency and resilience in manufacturing environments.

▶ **Marine control and monitoring**
Seamless communication for vessels such as ships, high speed light water craft, and offshore units.

▶ **Oil and Gas**
Integrated operations strategies in upstream and midstream processes enhancing remote surveillance and control capabilities.

▶ **Railway transportation signalling and telecommunications**
Control signaling and telecommunication for improved safety, risk management, operating efficiency, and signage.

▶ **Railway transportation fixed installation for power supply**
Substation automation and control systems which manage electric power delivery.

▶ **Smart grid**
Self-sufficient systems for automatic mitigation of power outages, service disruptions, and power quality problems. Accommodating power generation options such as distributed energy reserves, photo-voltaic, wind, and fuel cells.

▶ **Wastewater treatment**
Industrial sewage treatment plants for efficient and reliable water purification. Control systems ensure process optimization by intelligent control, regulation, and monitoring.

IT/OT convergence

Improve productivity and decision-making by integrating your operational technology (OT) and information technology (IT). Use the intelligence of Industry 4.0 to collect, analysis, and manage all your data in real time.

Network automation and orchestration

Powerful automation options include Allied Telesis Autonomous Management Framework™ Plus (AMF Plus), and open standard-based northbound API.

For easy integration into complex networks comprising physical, virtual, and multi-vendor devices, the IE360 Series features:

▶ NETCONF/RESTCONF + YANG data modelling for network automation.

▶ OpenFlow v1.3 for Software Defined Networking (SDN) orchestration.

Key Features

▶ 1/10 Gbits uplink ports with MACsec data protection

▶ 100 Mbits and 1Gbits uplink ports

▶ EMC for power utilities (IEC 61850-3, IEEE 1613)

▶ AlliedWare Plus™ operating system

▶ Allied Telesis Autonomous Management Framework Plus™ (AMF Plus)

▶ NETCONF/RESTCONF with YANG data modelling

▶ OpenFlow v1.3 for SDN

▶ QoS with traffic shaping

▶ Efficient forwarding of multicast streams

▶ Routing capabilities (BGP, ECMP, OSPF, RIP, and static)

▶ Extensive features for cybersecurity and denial of service prevention

▶ MACsec encryption @256-bits

▶ Active Fiber Monitoring™ (AFM)

▶ High Availability networking (EPSRing™, ITU-T G.8032, MRP)

▶ Automation and control protocols (Modbus/TCP, PROFINET IO[1])

▶ Upstream Forwarding Only (UFO)

▶ IEEE 802.3bt PoE++ sourcing (up to 95W)

▶ 360W of PoE power budget with dynamic power allocation

▶ Continuous PoE

▶ Extended operating temp range: -40°C to 75°C (tested @85°C)

▶ Fanless design

▶ Graceful thermal shutdown

▶ Protection circuits

▶ Alarm monitoring with trigger facility

▶ Redundant power inputs with voltage boost converter

▶ Certified for hazardous location[1]

[1] Contact sales representative for availability.

Key Features

Network Automation

▶ AMF Plus is a suite of tools providing centralized control and network automation, as well as visual intent-based network management. It has the the intelligence to set-up, optimize, and maintain the network according to predefined goals and policies.

▶ Powerful features like centralized management, auto backup, auto upgrade, auto provisioning and auto recovery enable plug-and-play networking and zero touch management.

▶ Integration with our Vista Manager visual monitoring and management platform means AMF Plus also provides intent-based features like:

- Health monitoring to easily investigate, analyze and improve overall network health.
- Smart ACLs to control and secure the resources that clients use in the network.
- intent-based QoS to deal with network bandwidth contention.

▶ AMF Plus is scalable and can be either deployed integrated into Allied Telesis equipment, or on multi-tenant cloud architecture.

Northbound Interfaces

▶ Open standard-based interfaces are supported to easily integrate with existing management systems.

▶ NETCONF/RESTCONF with YANG data modeling provides a standardized way to represent data and securely configure devices.

▶ OpenFlow is a key technology for SDN orchestration. SDN controllers and other tools support automated behavior in a network, and allow customized applications and services to be run.

Micro-segmentation for Network Security

▶ Micro-segmentation enhances converged IT/ OT network security by reducing the number of entry points for attackers or intruders. Isolating applications, data, and endpoints hampers the ability of intruders or malware to move within the network.

▶ SDN network orchestration enables self-learning Artificial Intelligence to propagate and adapt security policies to mitigate evolving cyber threats.

MACsec data protection

▶ Secure connectivity in critical infrastructure is essential. For example, power utilities require communication between the control center and remote sites to use point-to-point tunnels protected by MACsec.

▶ MACsec is a Layer 2 protocol that relies on GCM-AES cipher suites encryption to offer integrity, confidentiality, and origin authentication.

▶ This protects against data packet sniffing exploits, spoofing, and manipulation.

The advantages are:

- Secure communication beyond the link layer
- Line-rate throughput
- Microsecond latency
- Set-and-forget management
- Near-zero overhead
- Low total cost of ownership

▶ The IE360 Series features MACsec encryption on the 1/10Gbits uplink ports.

Resiliency

▶ EPSRing™ and ITU-T G.8032 ERPS enable a protected ring capable of recovery within as little as 50ms. These features are perfect for high performance and high availability.

▶ High-availability automation networks are supported with Media Redundancy Protocol (MRP) as defined by IEC62439-2. MRP used in ring networks allows up to 50 devices to have guaranteed and deterministic switchover behavior.

▶ Spanning Tree protocols RSTP and MSTP, along with static LAGs and the dynamic Link Aggregation Control Protocol (LACP), support high availability in star network topologies.

Automation and Control Protocols

▶ Automation and control protocols enable integration with OT supervisory and control systems.

PROFINET IO is a communication protocol for data exchange between I/O controllers, like SCADA and PLC, with I/O devices over Ethernet networks.

Supporting PROFINET certification,[2] the IE360 Series have I/O device properties that provide diagnostic data.

They support these communication channels:

- Standard TCP/IP (PROFINET NRT): suitable for non-deterministic functions such as parametrization, video/audio transmissions and data transfer to higher level IT systems.
- Real Time (PROFINET RT): TCP/IP layers are bypassed in order to have deterministic performance for automation applications.

▶ Modbus/TCP is intended for supervision and control of automation equipment. It is a variant of the MODBUS protocol using TCP/IP for communications on Ethernet networks.

The IE360 Series supports read/write register access and heartbeat functionality for efficient process control of both SCADA and slave devices.

Precise Time Synchronization (IEEE 1588)

▶ The IEEE 1588 Precise Time Protocol (PTP) is a fault tolerant method enabling clock synchronization in packet-based networks. This deterministic communication method provides precise timing for automation applications and measurement systems.

[2] Contact sales representative for availability.

▶ In power systems, time synchronization is required for synchrophasor measurements, protective line measurements, analog measurements, and SCADA time stamping.

Synchrophasors are instruments that measure the magnitude and phase angle of line voltage and current at multiple locations across the power grid. These measurements enable detection of instabilities so appropriate action can be taken.

SCADA systems require IED events to be logged with 1ms accuracy, which is achieved using PTP for timing distribution.

▶ The IE360 Series supports PTP power profiles as a Transparent Clock, and performs an active role in Ethernet networks to reduce the effects of link delay and residence time.[2]

Quality of Service (QoS)

▶ Comprehensive low-latency wire-speed QoS provides flow-based traffic management with full classification, prioritization, traffic shaping and min/max bandwidth profiles. Enjoy boosted network performance and guaranteed delivery of business-critical services and applications.

sFlow

▶ sFlow is an industry-standard technology for monitoring high-speed switched networks. It provides complete visibility into network use, enabling performance optimization, usage accounting/billing, and defense against security threats. Sampled packets sent to a collector ensure it always has a real-time view of network traffic.

Active Fiber Monitoring (AFM)

▶ Active Fiber Monitoring prevents eavesdropping on fiber communications by monitoring received optical power. If an intrusion is detected, the link can be automatically shut down, or an operator alert can be sent.

VLAN Mirroring (RSPAN)

▶ VLAN mirroring allows traffic from a port on a remote switch to be analyzed locally. Traffic being transmitted or received on the port is duplicated and sent across the network on a special VLAN.

VLAN Translation

▶ VLAN Translation allows traffic arriving on a VLAN to be mapped to a different VLAN on the outgoing paired interface.

VLAN Access Control List (ACLs)

▶ ACLs simplify access and traffic control across entire segments of the network. They can be applied to a VLAN as well as a specific port.

Upstream Forwarding Only (UFO)

▶ UFO lets you manage which ports in a VLAN can communicate with each other, and which only have upstream access to services, for secure multi-user deployment.

Key Features continued

Dynamic Host Configuration Protocol (DHCP) Snooping

▶ DHCP servers allocate IP addresses to clients, and the switch keeps a record of addresses issued on each port. IP source guard checks against this DHCP snooping database to ensure only clients with specific IP and/or MAC address can access the network. DHCP snooping can be combined with other features, like dynamic ARP inspection, to increase security in Layer 2 switched environments, and also provides a traceable history, which meets the growing legal requirements placed on service providers.

Link Layer Discovery Protocol–Media Endpoint Discovery (LLDP–MED)

▶ LLDP-MED extends LLDP basic network endpoint discovery and management functions. LLDP-MED allows for media endpoint specific messages, providing detailed information on power equipment, network policy, location discovery (for Emergency Call Services) and inventory.

Port Based DHCP IP Address Assignment

▶ DHCP server port-based address allocation ensures a replacement device receives the same IP address - even though the client-identifier or client hardware address has changed.

▶ That supports Industrial Automation and Control Systems (IACS), which are very sensitive to operation outages. When devices such as sensors and actuators fail, the must be replaced immediately.

Assigning the same IP address to the replaced device allows the OT supervisory system to take control and resume operation as quickly as possible, minimizing downtime.

Power over Ethernet (PoE)

▶ PoE provides flexibility and reduced cost by removing the need for a separate power connection to media endpoints. PoE++ supports higher power devices such as advanced security cameras, kiosks, POS terminals, Wi-Fi 6 access points, and LED light fixtures.

▶ IE360 Series switches comply with the standard IEEE 802.3bt and maintain backwards compatibility with previous methods. They feature the following PoE types:

- IEEE 802.3af,
  IEEE 802.3at Type 1 PoE @15.4W
- IEEE 802.3at Type 2 PoE+ @30W
- IEEE 802.3at 4PPoE Hi-PoE @60W
- IEEE 802.3bt type 3 PoE++ @60W
- IEEE 802.3bt type 4 PoE++ @95W

▶ You may configure the overall PoE power budget to match the real capabilities of the external Power Supply Unit (PSU). The PoE power budget may be allocated automatically and dynamically, based on the current usage of each powered device.

▶ If the devices connected to a switch require more power than the switch can deliver, the switch will deny power to some ports, according to the assigned priority.

Continuous PoE

▶ Continuous PoE allows the switch to be restarted without affecting the supply of power to connected devices. Smart lighting, security cameras, and other PoE devices will continue to operate during a software upgrade on the switch.

Alarm Monitoring and Trigger facility

▶ The IE360 Series alarm facility monitors the switch and responds to any problems. Example of alarm events include:

- Main power supply failure
- Over-temperature
- Port link down
- Alarm Input
- System power budget exceeded
- PoE device exceeds port power budget

▶ Triggers based on alarm events provide a smart mechanism that automatically changes the network configuration to reduce downtime.

Alarm Input/Output

▶ Alarm Input and Output responds to an event instantly and automatically with predefined actions. The 2-pin terminal blocks may be connected to sensors and actuator relays.

▶ Alarm Input receives signals from external devices like motion sensors and magnets that trigger specific actions when something changes.

▶ Alarm Output controls external devices like strobes and sirens when an event occurs.

Protection Circuits

▶ Optimized protection circuits guard against the following abnormal conditions:

- Reverse input voltage polarity
- Over- and under-voltage
- Over-current, peak-current and short-circuit
- Over-temperature

Enhanced Thermal Shutdown

▶ Enhanced thermal shutdown acts to restrict PoE power and services when the switch exceeds a safe operating temperature.

▶ The system restores operation when the temperature returns to acceptable levels.

Dual power inputs with voltage booster

▶ The redundant power inputs are for higher system reliability and to allow UPS emergency power over an extended period of time.

▶ The integrated voltage regulator allows a wide input voltage range and ensures the PoE output voltage always stays at the rated value, regardless the fluctuation on input voltage.

Hazardous Locations

▶ Hazardous locations include areas where flammable liquids, gases, vapors, or combustible dust exists in enough quantity to potentially cause an explosion or fire. Many applications, especially in the chemical, petrochemical (oil and gas), and mining industries require explosion protected equipment.

▶ The IE360 Series is designed for use in hazardous locations in accordance with US National Electric Code Publication 70 (NEC 70) and the European ATEX directive.[3]

Sturdy connectors for PoE++ sourcing @95W

▶ When unplugging a PoE++ powered device an arc may occur damaging the contact protection of the connector. Once the protective layer is damaged corrosion may continue to weaken the quality of connection. This can result in increased signal attenuation or even total loss of connection.

▶ The IE360 Series are equipped with RJ45 connectors that comply with the unmating (unplugging) under electrical load requirements standard as prescribed by IEC 60512-99-002. This compliance guarantees the level of contact resistance for connectors used for PoE++ 95W power supply.

Premium Software License

▶ By default, the IE360 Series offers a comprehensive feature set that includes Layer 2 switching, static routing and IPv6 management features. The feature set can easily be upgraded with premium software licenses.

[3] Contact sales representative for availability.

Key Solutions
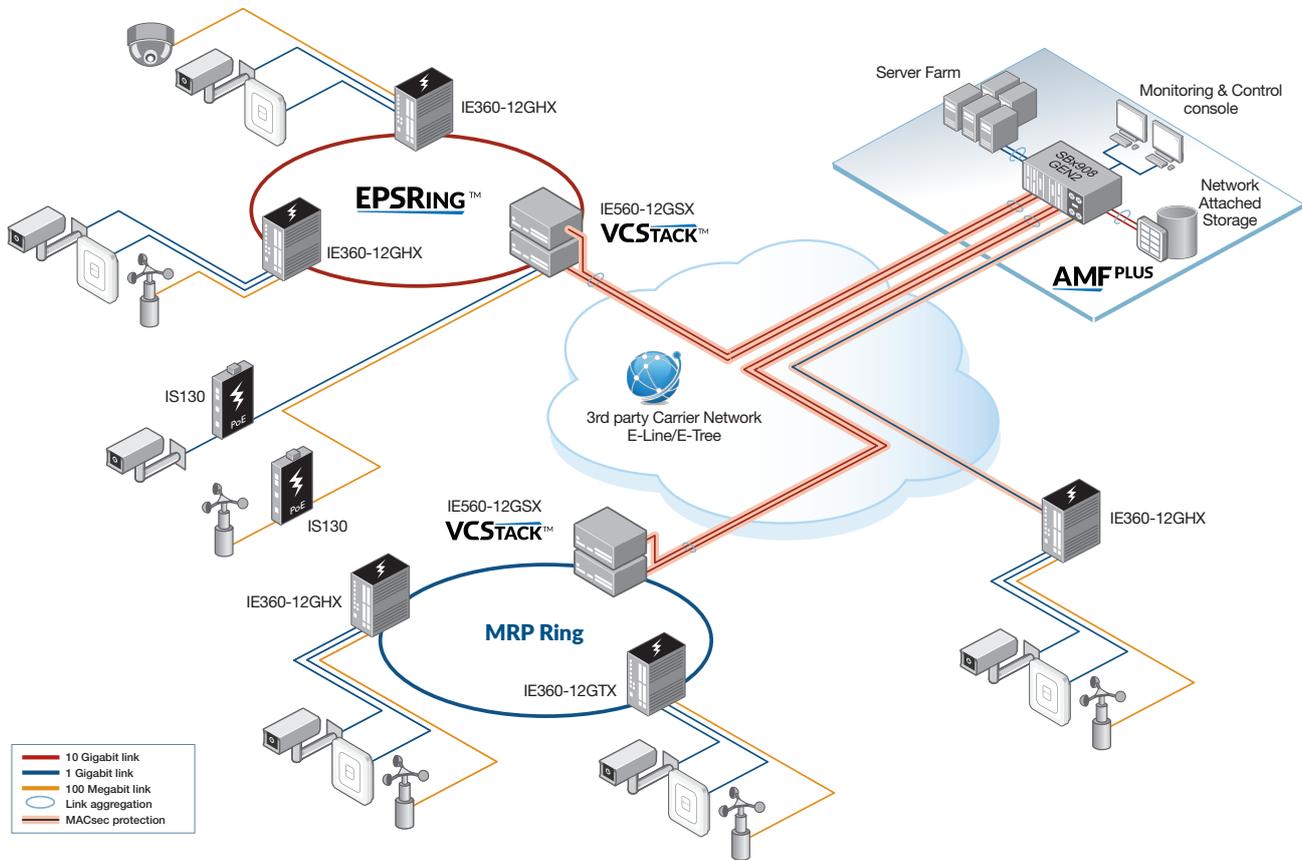

Energy systems are a critical infrastructure of modern society that serve as the backbone for economic activity, security, and consumers' daily lives.

With the migration to smart grids, there are an increased number of potentially vulnerable entry points through which the grid can be disrupted. A critical infrastructure must therefore employ sophisticated and scalable security measures to prevent malicious attacks.

Operators of Essential Services (OES) either operate self-owned private networks, or lease services from carriers/service providers. OES have adopted MACsec (IEEE 802.1AE) to protect multiple communication flows over the same physical link. It can be used as an alternative to IPsec, as it can protect multicast, broadcast, and non-IP packets.

Key Solutions

MACsec secures communication between an operation center and remote sites with line-rate throughput, as a Layer 2 security protocol that provides point-to-point security on Ethernet links. Data remains encrypted and secure during the entire transmission between sender and receiver even if there are multiple hops in between.

The IE360 Series supports MACsec with the Advanced Encryption Standards CGM-AES-256 and CGM-AESXPN-256, which are the most powerful symmetric encryption algorithms that use a 256-bit key to scramble data into an unreadable format.

Specifications

PRODUCT	10/100/1000T (RJ-45) COPPER PORTS	100/1000X SFP PORTS	1/10G SFP+ PORTS	TOTAL PORTS	POE ENABLED PORTS	SWITCHING FABRIC	FORWARDING RATE
IE360-12GHX	8	2	2 w/ MACsec	12	8	60Gbps	44.6Mpps
IE360-12GTX	8	2	2 w/ MACsec	12	-	60Gbps	44.6Mpps

Performance
RAM memory	512MB DDR SDRAM
ROM memory	128MB flash
MAC address	16K entries
Packet Buffer	2 MBytes (16 Mbits)
Priority Queues	8
Simultaneous VLANs	4K
VLAN ID range	1–4094
Jumbo frames	12KB L2 jumbo frames
Multicast groups	1,023 (Layer 2 and Layer 3)

Other Interfaces
Type	Serial console (UART)
Port no.	1
Connector	RJ-45 female
Type	USB2.0 (Host Controller Class)
Port no.	1
Connector	Type A receptacle
Type	Alarm input (2mA @5.0Vdc)
Port no.	1
Connector	2-pin Terminal Block
Type	Alarm output (1A @30Vdc)
Port no.	1
Connector	2-pin Terminal Block

Flexibility and Compatibility
▸ SFP ports support any combination of Allied Telesis 100Mbps and 1Gbps SFP modules listed in this document under Ordering Information

Reliability
▸ Modular AlliedWare™ operating system
▸ Protection circuits against abnormal operations
▸ Redundant power input
▸ Full environmental monitoring of temperature and internal voltage levels
▸ Enhanced Thermal Shutdown

Industrial Automation
▸ IEEE 1588 PTP one-step variant
▸ IEEE 1588 PTP two-step variant[4]
▸ IEEE 1588 PTP End-to-End Transparent Clock
▸ IEEE 1588 PTP Peer-to-Peer Transparent Clock[4]
▸ IEEE 1588 PTP profile: Default
▸ IEEE 1588 PTP profile: Power (IEEEC C37.238)[4]
▸ IEEE 1588 PTP profile: Power (IEC 61850-9-3)[4]
▸ Modbus/TCP with master/slave heartbeats facility
▸ PROFINET IO non-real-time and real-time (NRT/RT)[4]

Management Features
▸ Allied Telesis Autonomous Management Framework™ Plus (AMF Plus) node
▸ NETCONF/RESTCONF northbound interface with YANG data modelling
▸ OpenFlow northbound interface
▸ Web-based Graphical User Interface (GUI)
▸ Industry-standard CLI with context-sensitive help
▸ Powerful CLI scripting engine

▸ Built-in text editor
▸ Event-based triggers allow user-defined scripts to be executed upon selected system events
▸ Link Layer Discovery Protocol (LLDP)
▸ Link Layer Discovery Protocol - Media Endpoint Discovery (LLDP-MED)
▸ SNMPv1/v2c/v3 support
▸ Comprehensive SNMP MIB support for standard based device management
▸ Console management port on the front panel for ease of access
▸ Front panel LEDs provide at-a-glance PSU status, PoE status, and fault information
▸ Eco-friendly mode allows ports and LEDs to be disabled to save power
▸ USB interface allows software release files, configurations, and other files to be stored for backup and distribution to other devices
▸ Recessed Reset button

IPv4 Features
▸ Black hole routing
▸ Directed broadcast forwarding
▸ Equal Cost Multi Path (ECMP) routing
▸ Dynamic routing (OSPF, RIP, and BGP)
▸ Static unicast and multicast routes for IPv4
▸ UDP broadcast helper (IP helper)

IPv6 Features
▸ Device management over IPv6 networks with SNMPv6, Telnetv6 and SSHv6
▸ IPv4 and IPv6 dual stack
▸ IPv6 hardware ACLs
▸ Dynamic routing (OSPFv3, RIPng, and BGP+)
▸ Static unicast routing for IPv6
▸ IPv6 Ready certified

Multicasting Features
▸ Internet Group Management Protocol (IGMPv1/v2/v3)
▸ IGMP snooping with fast leave
▸ IGMP query solicitation
▸ Multicast Listener Discovery (MLDv1/v2)
▸ MLDv2 for IPv6
▸ MLD snooping
▸ IGMP/MLD proxy (multicast forwarding)
▸ Protocol Independent Multicast - Dense Mode (PIM-DM)
▸ Protocol Independent Multicast - Sparse Mode (PIM-SM)

Quality of Service
▸ 8 priority queues with a hierarchy of high priority queues for real-time traffic, and mixed scheduling, for each switch port
▸ Extensive remarking capabilities
▸ IP precedence and DiffServ marking based on Layer 2, 3 and 4 headers

[4] Contact sales representative for availability.

▸ Limit bandwidth per port or per traffic class down to 64kbps
▸ Policy-based QoS and traffic shaping
▸ Policy-based QoS based on VLAN, port, MAC and general packet classifiers
▸ Policy-based storm protection
▸ Strict priority, weighted round robin or mixed scheduling
▸ Taildrop for queue congestion control
▸ Wirespeed traffic classification with low latency for real-time streaming media applications

Resiliency Features
▸ Control Plane Prioritization (CPP) ensures the CPU always has sufficient bandwidth to process network control traffic
▸ Dynamic link failover (host attach)
▸ Ethernet Protection Switching Ring (EPSR™) with SuperLoop Prevention (EPSR-SLP™)
▸ Ethernet Ring Protection Switching (ITU-T G.8032 ERPS)
▸ Link Aggregation Control Protocol (LACP)
▸ Loop detection and thrash limiting
▸ Media Redundancy Protocol (MRP)
▸ Multiple Spanning Tree Protocol (MSTP)
▸ PVST+ compatibility mode
▸ Rapid Spanning Tree Protocol (RSTP)
▸ Router Redundancy Protocol (RRP) snooping
▸ Spanning Tree Protocol (STP) root guard
▸ Virtual Router Redundancy Protocol (VRRPv3)

Security Features
▸ Access Control Lists (ACLs) based on layer 3 and 4 headers
▸ Authentication, Authorization and Accounting (AAA)
▸ Auth-fail and guest VLANs
▸ Configurable ACLs for management traffic
▸ BPDU protection
▸ DHCP snooping, IP source guard and Dynamic ARP Inspection (DAI)
▸ DoS attack blocking and virus throttling
▸ Dynamic VLAN assignment
▸ HTTP over TLS (HTTPS)
▸ MAC address filtering and MAC address lockdown
▸ MACsec encryption (cipher suite: CGM-AES-128, CGM-AES-256, CGM-AES-XPN-256)
▸ Network Access and Control (NAC) features manage endpoint security
▸ Password protected bootloader
▸ Port-based learn limits (intrusion detection)
▸ Private VLANs and port isolation for multiple customers using the same VLAN
▸ RADIUS local server (100 users) and accounting
▸ Secure Copy (SCP)
▸ Strong password security and encryption
▸ TACACS+ authentication and accounting
▸ Tri-authentication: MAC-based, web-based and IEEE 802.1X

Virtual LAN Features

▸ Generic VLAN Registration Protocol (GVRP)
▸ VLAN stacking, Q-in-Q
▸ VLAN translation
▸ Upstream Forwarding Only (UFO)

Services

▸ Domain Name System (DNS) client and relay
▸ DNSv6 client and relay
▸ Dynamic Host Configuration Protocol (DHCP) server and relay
▸ DHCPv6 server and relay
▸ HyperText Transfer Protocol (HTTP/1.1)
▸ Network Time Protocol (NTP) for IPv4 and IPv6
▸ Simple Mail Transfer Protocol (SMTP)
▸ Secure Shell (SSHv2/v3)
▸ TELNET
▸ Trivial File Transfer Protocol (TFTP)

Diagnostic Tools

▸ Active Fiber Monitoring (AFM) detects tampering on optical links
▸ Automatic link flap detection and port shutdown
▸ Built-In Self-Test (BIST)
▸ Cable fault locator (TDR)
▸ Connectivity Fault Management (CFM), Continuity Check Protocol (CCP) for use with ITU-T G.8032 ERPS
▸ Event logging via Syslog over IPv4
▸ Find-me device locator
▸ Optical Digital Diagnostic Monitoring (DDM)
▸ Ping polling for IPv4 and IPv6
▸ Port mirroring
  » No limit on mirrored ports
  » Up to 4 mirror (analyzer) ports for received traffic
  » 1 mirror (analyzer) port for transmitted traffic
▸ VLAN mirroring (RSPAN)
▸ sFlow
▸ TraceRoute for IPv4 and IPv6
▸ UniDirectional Link Detection (UDLD)

Environmental Specifications[5]

▸ Operating temperature range:[6]
  -40°C to 75°C (-40°F to 167°F)
  +85°C (dry heat endurance test for 20 hours)
▸ Storage temperature range:
  -40°C to 85°C (-40°F to 185°F)
▸ Operating humidity range:
  5% to 95% non-condensing
▸ Storage humidity range:
  5% to 95% non-condensing
▸ Operating altitude:
  3,000 meters maximum (9,843 ft)

Mechanical

▸ EN 50022, EN 60715 standardized mounting on rails

[5] Refer to the Installation Guide for the full list of environmental tests.

[6] Refer to the Installation Guide for more details on the safety approved power ratings and thermal conditions.

[7] Requires primary and redundant power supplies.

[8] Contact sales representative for availability.

PRODUCT	WIDTH X DEPTH X HEIGHT	WEIGHT	ENCLOSURE	MOUNTING	PROTECTION RATE
IE360-12GHX	91 x 158 x 153 mm (3.58 x 6.23 x 6.02 in)	DIN rail: 2.2 kg (4.88 lbs) Wall mount: 2.1 kg (4.64 lbs)	Aluminum/Stainless Steel Sheet Metal shell	DIN rail, wall mount	IP30
IE360-12GTX	91 x 158 x 153 mm (3.58 x 6.23 x 6.02 in)	DIN rail: 2.1 kg (4.64 lbs) Wall mount: 2.06 kg (4.54 lbs)	Aluminum/Stainless Steel Sheet Metal shell	DIN rail, wall mount	IP30

Power Characteristics

PRODUCT	INPUT VOLTAGE	COOLING	NO POE LOAD			FULL POE LOAD[9]		
			MAX POWER CONSUMPTION	MAX HEAT DISSIPATION	NOISE	MAX POWER CONSUMPTION	MAX HEAT DISSIPATION	NOISE
IE360-12GHX	18~57V DC[10]	fanless	29.9W	102.0 BTU/hr	-	406.5W	158.7 BTU/hr	-
IE360-12GTX	18~57V DC	fanless	25.0W	85.3 BTU/hr	-	-	-	-

[9] The Max Power consumption at full PoE load includes the powered device's consumption and margin. The cooling requirements of the switch are smaller than the power draw, because most of the load is dissipated at the PoE powered device and along the cabling. Use these wattage and BTU ratings for facility capacity planning.

[10] Note: PoE sourcing requires the input voltage ≥ 36V DC

Power over Ethernet Sourcing Characteristics

PRODUCT	ENABLED POE PORTS	MAX POE POWER BUDGET[11]	MAX POE SOURCING PORTS			
			POE (15W)	POE+ (30W)	POE++ (60W)	POE++ (95W)
IE360-12GHX	8	360W	8	8	6	3
IE360-12GTX	-	-	-	-	-	-

[11] The PoE power budget is shared among all ports; we recommend configuring dynamic PoE power allocation to optimize the power distribution.

Standards and Protocols

AlliedWare Plus Operating System
Version 5.5.4-2

Authentication
RFC 1321   MD5 Message-Digest algorithm
RFC 1828   IP authentication using keyed MD5

Automation and Control
Modbus/TCP
IEC 61158   Industrial communication networks - Fieldbus specifications - PROFINET
IEC 61784   Industrial communication networks - communication profile - PROFINET
IEEE 1588-2019 Precision Clock Synchronization Protocol
IEC/IEEE 61850-9-3:2016 Precision time protocol profile for power utility automation
IEEE C37.238-2017 Precision time protocol profile for power system applications

Border Gateway Protocol (BGP)
BGP dynamic capability
BGP outbound route filtering
RFC 1772   Application of the Border Gateway Protocol (BGP) in the Internet
RFC 1997   BGP communities attribute
RFC 2439   BGP route flap damping
RFC 2545   Use of BGP-4 multiprotocol extensions for IPv6 inter-domain routing
RFC 2918   Route refresh capability for BGP-4
RFC 3882   Configuring BGP to block Denial-of-Service (DoS) attacks
RFC 4271   Border Gateway Protocol 4 (BGP-4)
RFC 4360   BGP extended communities
RFC 4456   BGP route reflection - an alternative to full mesh iBGP
RFC 4724   BGP graceful restart
RFC 4760   Multiprotocol Extensions for BGP-4
RFC 5065   Autonomous system confederations for BGP
RFC 5492   Capabilities Advertisement with BGP-4
RFC 5925   The TCP Authentication Option
RFC 6793   BGP Support for Four-Octet Autonomous System (AS) Number Space
RFC 7606   Revised Error Handling for BGP UPDATE Messages

Encryption (Management Traffic Only)
FIPS 180-1   Secure Hash standard (SHA-1)
FIPS 186   Digital signature standard (RSA)
FIPS 46-3   Data Encryption Standard (DES and 3DES)

Ethernet
IEEE 802.2   Logical Link Control (LLC)
IEEE 802.3   Ethernet
IEEE 802.3ab 1000BASE-T
IEEE 802.3ae 10 Gigabit Ethernet
IEEE 802.3af   Power over Ethernet (PoE)
IEEE 802.3an 10GBASE-T
IEEE 802.3at   Power over Ethernet up to 30W (PoE+)
IEEE 802.3az   Energy Efficient Ethernet (EEE)
IEEE 802.3bt   Power over Ethernet (PoE++)
IEEE 802.3u   100BASE-X
IEEE 802.3x   Flow control - full-duplex operation
IEEE 802.3z   1000BASE-X

IPv4 Features
RFC 768   User Datagram Protocol (UDP)
RFC 791   Internet Protocol (IP)
RFC 792   Internet Control Message Protocol (ICMP)
RFC 793   Transmission Control Protocol (TCP)
RFC 826   Address Resolution Protocol (ARP)
RFC 894   Standard for the transmission of IP datagrams over Ethernet networks
RFC 919   Broadcasting Internet datagrams
RFC 922   Broadcasting Internet datagrams in the presence of subnets
RFC 932   Subnetwork addressing scheme
RFC 950   Internet standard subnetting procedure
RFC 951   Bootstrap Protocol (BootP)

RFC 1027   Proxy ARP
RFC 1035   DNS client
RFC 1042   Standard for the transmission of IP datagrams over IEEE 802 networks
RFC 1071   Computing the Internet checksum
RFC 1122   Internet host requirements
RFC 1191   Path MTU discovery
RFC 1256   ICMP router discovery messages
RFC 1518   An architecture for IP address allocation with CIDR
RFC 1519   Classless Inter-Domain Routing (CIDR)
RFC 1542   Clarifications and extensions for BootP
RFC 1591   Domain Name System (DNS)
RFC 1812   Requirements for IPv4 routers
RFC 1918   IP addressing
RFC 2581   TCP congestion control

IPv6 Features
RFC 1981   Path MTU discovery for IPv6
RFC 2460   IPv6 specification
RFC 2464   Transmission of IPv6 packets over Ethernet networks
RFC 3484   Default address selection for IPv6
RFC 3587   IPv6 global unicast address format
RFC 3596   DNS extensions to support IPv6
RFC 4007   IPv6 scoped address architecture
RFC 4193   Unique local IPv6 unicast addresses
RFC 4213   Transition mechanisms for IPv6 hosts and routers
RFC 4291   IPv6 addressing architecture
RFC 4443   Internet Control Message Protocol (ICMPv6)
RFC 4861   Neighbor discovery for IPv6
RFC 4862   IPv6 Stateless Address Auto-Configuration (SLAAC)
RFC 5014   IPv6 socket API for source address selection
RFC 5095   Deprecation of type 0 routing headers in IPv6
RFC 5175   IPv6 Router Advertisement (RA) flags option
RFC 6105   IPv6 Router Advertisement (RA) guard

Management
AT Enterprise MIB including AMF Plus MIB and traps
Optical DDM MIB
SNMPv1, v2c and v3
ANSI/TIA-1057 Link Layer Discovery Protocol-Media Endpoint Discovery (LLDP-MED)
IEEE 802.1AB Link Layer Discovery Protocol (LLDP)
RFC 1155   Structure and identification of management information for TCP/IP-based Internets
RFC 1157   Simple Network Management Protocol (SNMP)
RFC 1212   Concise MIB definitions
RFC 1213   MIB for network management of TCP/IP-based Internets: MIB-II
RFC 1215   Convention for defining traps for use with the SNMP
RFC 1227   SNMP MUX protocol and MIB
RFC 1239   Standard MIB
RFC 1724   RIPv2 MIB extension
RFC 2011   SNMPv2 MIB for IP using SMIv2
RFC 2012   SNMPv2 MIB for TCP using SMIv2
RFC 2013   SNMPv2 MIB for UDP using SMIv2
RFC 2578   Structure of Management Information v2 (SMIv2)
RFC 2579   Textual conventions for SMIv2
RFC 2580   Conformance statements for SMIv2
RFC 2674   Definitions of managed objects for bridges with traffic classes, multicast filtering and VLAN extensions
RFC 2741   Agent extensibility (AgentX) protocol
RFC 2819   RMON MIB (groups 1,2,3 and 9)
RFC 2863   Interfaces group MIB
RFC 3176   sFlow: a method for monitoring traffic in switched and routed networks
RFC 3411   An architecture for describing SNMP management frameworks
RFC 3412   Message processing and dispatching for the SNMP
RFC 3413   SNMP applications
RFC 3414   User-based Security Model (USM) for SNMPv3
RFC 3415   View-based Access Control Model (VACM) for SNMP

RFC 3416   Version 2 of the protocol operations for the SNMP
RFC 3417   Transport mappings for the SNMP
RFC 3418   MIB for SNMP
RFC 3621   Power over Ethernet (PoE) MIB
RFC 3635   Definitions of managed objects for the Ethernet-like interface types
RFC 3636   IEEE 802.3 MAU MIB
RFC 4022   MIB for the Transmission Control Protocol (TCP)
RFC 4113   MIB for the User Datagram Protocol (UDP)
RFC 4188   Definitions of managed objects for bridges
RFC 4292   IP forwarding table MIB
RFC 4293   MIB for the Internet Protocol (IP)
RFC 4318   Definitions of managed objects for bridges with RSTP
RFC 4560   Definitions of managed objects for remote ping, traceroute and lookup operations
RFC 5424   The Syslog protocol
RFC 6527   Definitions of managed objects for VRRPv3

Multicast Support
Bootstrap Router (BSR) mechanism for PIM-SM
IGMP query solicitation
IGMP snooping (IGMPv1, v2 and v3)
IGMP snooping fast-leave
IGMP/MLD multicast forwarding (IGMP/MLD proxy)
MLD snooping (MLDv1 and v2)
PIM-SM and SSM for IPv6
RFC 2236   Internet Group Management Protocol v2 (IGMPv2)
RFC 2710   Multicast Listener Discovery (MLD) for IPv6
RFC 2715   Interoperability rules for multicast routing protocols
RFC 3306   Unicast-prefix-based IPv6 multicast addresses
RFC 3376   IGMPv3
RFC 3590   Source Address Selection for the Multicast Listener Discovery (MLD) Protocol
RFC 3810   Multicast Listener Discovery v2 (MLDv2) for IPv6
RFC 3956   Embedding the Rendezvous Point (RP) address in an IPv6 multicast address
RFC 3973   PIM Dense Mode (DM)
RFC 4541   IGMP and MLD snooping switches
RFC 4604   Using IGMPv3 and MLDv2 for source-specific multicast
RFC 4607   Source-specific multicast for IP
RFC 7761   Protocol Independent Multicast - Sparse Mode (PIM-SM): Protocol specification

Open Shortest Path First (OSPF)
OSPF link-local signaling
OSPF MD5 authentication
OSPF restart signaling
Out-of-band LSDB resync
RFC 1245   OSPF protocol analysis
RFC 1246   Experience with the OSPF protocol
RFC 1370   Applicability statement for OSPF
RFC 1765   OSPF database overflow
RFC 2328   OSPFv2
RFC 2370   OSPF opaque LSA option
RFC 2740   OSPFv3 for IPv6
RFC 3101   OSPF Not-So-Stubby Area (NSSA) option
RFC 3509   Alternative implementations of OSPF area border routers
RFC 3623   Graceful OSPF restart
RFC 3630   Traffic engineering extensions to OSPF
RFC 4552   Authentication/confidentiality for OSPFv3
RFC 5329   Traffic engineering extensions to OSPFv3
RFC 5340   OSPFv3 for IPv6 (partial support)

Quality of Service (QoS)
IEEE 802.1p Priority tagging
RFC 2211   Specification of the controlled-load network element service
RFC 2474   DiffServ precedence for eight queues/port
RFC 2475   DiffServ architecture
RFC 2597   DiffServ Assured Forwarding (AF)
RFC 2697   A single-rate three-color marker

RFC 2698   A two-rate three-color marker
RFC 3246   DiffServ Expedited Forwarding (EF)

Resiliency Features

IEC 62439-2 Media Redundancy Protocol (MRP)
IEEE 802.3ad Static and dynamic link aggregation
EEE 802.1ag CFM Continuity Check Protocol (CCP)
IEEE 802.1AX Link aggregation (static and LACP)
IEEE 802.1D MAC bridges
IEEE 802.1s Multiple Spanning Tree Protocol (MSTP)
IEEE 802.1w Rapid Spanning Tree Protocol (RSTP)
ITU-T G.8032 / Y.1344 Ethernet Ring Protection Switching
            (ERPS)
RFC 5798   Virtual Router Redundancy Protocol version 3
            (VRRPv3) for IPv4 and IPv6

Routing Information Protocol (RIP)

RFC 1058   Routing Information Protocol (RIP)
RFC 2080   RIPng for IPv6
RFC 2081   RIPng protocol applicability statement
RFC 2082   RIP-2 MD5 authentication
RFC 2453   RIPv2

Security Features

SSH remote login
SSLv2 and SSLv3
TACACS+ Accounting, Authentication, Authorization (AAA)
IEEE 802.1AE MAC Security (MACsec), cipher suite:
            GCM-AES-128, GCM-AES-256,
            GCM-AES-1XPN-256
IEEE 802.1X Authentication protocols (TLS, TTLS, PEAP and
            MD5)
IEEE 802.1X Multi-supplicant authentication
IEEE 802.1X Port-based network access control
RFC 2818   HTTP over TLS ("HTTPS")
RFC 2865   RADIUS authentication
RFC 2866   RADIUS accounting

RFC 2868   RADIUS attributes for tunnel protocol support
RFC 2986   PKCS #10: certification request syntax
            specification v1.7
RFC 3579   RADIUS support for Extensible Authentication
            Protocol (EAP)
RFC 3580   IEEE 802.1x RADIUS usage guidelines
RFC 3748   Extensible Authentication Protocol (EAP)
RFC 4251   Secure Shell (SSHv2) protocol architecture
RFC 4252   Secure Shell (SSHv2) authentication protocol
RFC 4253   Secure Shell (SSHv2) transport layer protocol
RFC 4254   Secure Shell (SSHv2) connection protocol
RFC 5176   RADIUS CoA (Change of Authorization)
RFC 5246   Transport Layer Security (TLS) v1.2
RFC 5280   X.509 certificate and Certificate Revocation
            List (CRL) profile
RFC 5425   Transport Layer Security (TLS) transport
            mapping for Syslog
RFC 5656   Elliptic curve algorithm integration for SSH
RFC 6125   Domain-based application service identity
            within PKI using X.509 certificates with TLS
RFC 6614   Transport Layer Security (TLS) encryption for
            RADIUS
RFC 6668   SHA-2 data integrity verification for SSH

Services

RFC 854   Telnet protocol specification
RFC 855   Telnet option specifications
RFC 857   Telnet echo option
RFC 858   Telnet suppress go ahead option
RFC 1091   Telnet terminal-type option
RFC 1350   The TFTP protocol (revision 2)
RFC 1985   SMTP service extension
RFC 2049   MIME
RFC 2131   DHCPv4 (server, relay and client)
RFC 2132   DHCP options and BootP vendor extensions
RFC 2616   Hypertext Transfer Protocol - HTTP/1.1
RFC 2821   Simple Mail Transfer Protocol (SMTP)

RFC 2822   Internet message format
RFC 3046   DHCP relay agent information option (DHCP
            option 82)
RFC 3315   Dynamic Host Configuration Protocol for IPv6
            (DHCPv6)
RFC 3396   Encoding Long Options in the Dynamic Host
            Configuration Protocol (DHCPv4)
RFC 3633   IPv6 prefix options for DHCPv6
RFC 3646   DNS configuration options for DHCPv6
RFC 3993   Subscriber-ID suboption for DHCP relay agent
            option
RFC 4954   SMTP Service Extension for Authentication
RFC 5905   Network Time Protocol (NTP) version 4

VLAN LAN Features

Generic VLAN Registration Protocol (GVRP)
Voice VLAN
IEEE 802.1ad Provider bridges (VLAN stacking, Q-in-Q)
IEEE 802.1Q Virtual LAN (VLAN) bridges
IEEE 802.1v VLAN classification by protocol and port
IEEE 802.3acVLAN tagging

Feature Licenses

NAME	DESCRIPTION	INCLUDES
AT-IE360-FL01	IE360 Series Premium license	▶ BGP (64 routes) ▶ BGP+ (64 routes) ▶ OSPF (256 routes) ▶ OSPFv3 (256 routes) ▶ PIM-SM, DM and SSM (256 routes) ▶ PIMv6-SM and SSM (256 routes) ▶ RIP (256 routes) ▶ RIPng (256 routes)

Ordering Information

Switches

The DIN rail and wall mount kits are included.
The management serial console cable is NOT included

AT-IE360-12GHX-xx
8x 10/100/1000T,
2x 100/1000X SFP, 2x 1G/10G SFP+
Industrial Ethernet, Layer 3 Switch,
PoE++ Support

AT-IE360-12GTX-xx
8x 10/100/1000T,
2x 100/1000X SFP, 2x 1G/10G SFP+
Industrial Ethernet, Layer 3 Switch

Where xx = 80 standard Country of Origin
980 TAA compliant Country of Origin

Power Supplies

AT-IE048-120-20
120W @48Vdc, Industrial AC/DC power supply,
DIN rail mount (5 years warranty)

AT-IE048-240-20
240W @48Vdc, Industrial AC/DC power supply,
DIN rail mount (5 years warranty)

AT-IE048-480-20
480W @48Vdc, Industrial AC/DC power supply,
DIN rail mount (5 years warranty)

AT-SDR120-48
120W @48Vdc, Industrial AC/DC power supply,
DIN rail mount

AT-SDR240-48
240W @48Vdc, Industrial AC/DC power supply,
DIN rail mount

AT-SDR480-48
480W @48Vdc, Industrial AC/DC power supply,
DIN rail mount

Supported SFP Modules

Refer to the installation guide for the recommended Max.
Operating Temperature according to the selected SFP
module.

10Gbps SFP+ Modules

AT-SP10BD10/I-12
10 km, 10G BiDi SFP, LC, SMF,
(1270 Tx/1330 Rx)

AT-SP10BD10/I-13
10 km, 10G BiDi SFP, LC, SMF,
(1330 Tx/1270 Rx)

AT-SP10BD20-12
20 km, 10G SFP, LC, SMF, TAA
(1270 Tx/1330 Rx)

AT-SP10BD20-13
20 km, 10G SFP, LC, SMF, TAA
(1330 Tx/1270 Rx)

AT-SP10BD40/I-12
40 km, 10G SFP, LC, SMF, I-Temp, TAA
(1270 Tx/1330 Rx)

AT-SP10BD40/I-13
40 km, 10G SFP, LC, SMF, I-Temp, TAA
(1330 Tx/1270 Rx)

AT-SP10BD80/I-14
80 km, 10G SFP, LC, SMF, I-Temp, TAA
(1490 Tx/1550 Rx)

AT-SP10BD80/I-15
80 km, 10G SFP, LC, SMF, I-Temp, TAA
(1550 Tx/1490 Rx)

AT-SP10ER40a/I
40 km, 10G SFP, LC, SMF,1550 nm, I-Temp, TAA

AT-SP10LRa/I
10 km, 10G SFP, LC, SMF,1310 nm, I-Temp, TAA

AT-SP10SR
300 m, 10G SFP, LC, MMF,850 nm, TAA

AT-SP10SR/I-90
300 m, 10G SFP, LC, MMF,850 nm, I-Temp, TAA

AT-SP10TM
20 m, 1/10G SFP, RJ-45, I-Temp, TAA

AT-SP10ZR80/I
80 km, 10G SFP, LC, SMF,1550 nm, I-Temp

1000Mbps SFP Modules

AT-SPBD10-13
10 km, 1G BiDi SFP, LC, SMF, I-Temp
(1310 Tx/1490 Rx)

AT-SPBD10-14
10 km, 1G BiDi SFP, LC, SMF, I-Temp
(1490 Tx/1310 Rx)

AT-SPBD20-13/I
20 km, 1G BiDi SFP, SC, SMF, I-Temp,
(1310 Tx/1490 Rx)

AT-SPBD20-14/I
20 km, 1G BiDi SFP, SC, SMF, I-Temp,
(1490 Tx/1310 Rx)

AT-SPBD20LC/I-13
20 km, 1G BiDi SFP, LC, SMF, I-Temp, TAA
(1310 Tx/1490 Rx)

AT-SPBD20LC/I-14
20 km, 1G BiDi SFP, LC, SMF, I-Temp, TAA
(1490 Tx/1310 Rx)

AT-SPBD40-13/I
40 km, 1G BiDi SFP, LC, SMF, I-Temp,
(1310 Tx/1490 Rx)

AT-SPBD40-14/I
40 km, 1G BiDi SFP, LC, SMF, I-Temp,
(1490 Tx/ 1310 Rx)

AT-SPEX/E-90
2 km, 1000EX SFP, LC, MMF, 1310 nm, Ext. Temp,
TAA

AT-SPLX10a
10 km, 1000LX SFP, LC, SMF, 1310 nm, TAA

AT-SPLX10/I
10 km, 1000LX SFP, LC, SMF, 1310 nm, I-Temp

AT-SPLX10/E-90
10 km, 1000LX SFP, LC, SMF, 1310 nm, Ext. Temp,
TAA

AT-SPLX40
40 km, 1000LX SFP, LC, SMF, 1310 nm

AT-SPLX40/E-90
40 km, 1000LX SFP, LC, SMF, 1310 nm, Ext. Temp,
TAA

AT-SPSX-90
550 m, 1000SX SFP, LC, MMF, 850 nm, TAA

AT-SPSX/I-90
550 m, 1000SX SFP, LC, MMF, 850 nm, I-Temp,
TAA

AT-SPSX/E-90
550 m, 1000SX SFP, LC, MMF, 850 nm, Ext. Temp,
TAA

AT-SPTX-90
100 m, 10/100/1000T SFP, RJ-45, TAA

AT-SPTX/I
100 m, 10/100/1000T SFP, RJ-45, I-Temp

AT-SPZX120/I
120 km, 1000LX SFP, LC, SMF, 1550 nm, I-Temp,
TAA

100Mbps SFP modules

AT-SPFX/2-90
2 km, 100FX SFP, LC, MMF, 1310 nm, TAA

AT-SPFX30/I-90
30 km, 100FX SFP, LC, SMF, 1310 nm, I-Temp, TAA

Passive Interconnection Cables

AT-SP10TW1
Twinax direct attach cable (1 meter)

AT-SP10TW3
Twinax direct attach cable (3 meter)

Passive Interconnection Cables

AT-VT-Kit3
Management cable (USB to serial console)

Allied Telesis™
